

Preparation for Subdermal Contraceptive Implant Device (SDI) REMOVAL

Preparation

- A specialized physician will examine your upper arm - position of the implant, if palpable.
- Explain about the expected removal failure rate.
- Try to come for the appointment without children.
- Ensure that you do not have any commitments after the removal procedure as you may need observation for 15 minutes at the Health Center.

After the Procedure

- A small dressing will be placed over the wound site.
- Try to keep the dressing clean and dry to prevent any infection.
- Please ensure to follow the physician instruction
